

ABSTRACT

HAIR REGENERATOR

5 The invention relates to a hair regenerator which is based on a regenerator such as that described in patent of invention 200200105, comprising a mixture of an epidermal growth factor, dexpanthenol and sodium hyaluronate, said mixture being applied by means of intradermic trichotherapy alternated with a surface cosmetic treatment. The invention
10 consists in replacing the epidermal growth factor in the aforementioned patent, specifically a protein obtained through the genetic transformation of *Saccharomyces Cerevisae* yeast cells with DNA segment encoding the synthesis of said protein, with a protein comprising an embryonic amniotic liquid extract from cattle in the fifth week of gestation. In this
15 way, the inventive regenerator provides a cure for existing pathologies relating to the scalp and produces capillary neoformation in a shorter amount of time and with higher quality indices.
